

Quality Policy

Aerospace and Controls Technology Limited is a flexible solutions provider for electrical and mechanical assembly of a wide range of products. It is our goal to consistently supply products and services that meet, if not exceed, our customers' expectations.

Our Quality Management System (QMS) has been developed and is maintained to comply with the requirements of BS EN ISO 9001:2008 to ensure that we not only provide, but sustain, quality in all of our activities.

All members of staff have been empowered to support the aim of improving the quality of our products and services and are familiarised with the QMS. To support them they will receive training and development according to their individual and the company's needs.

The QMS is fully supported by the management team who have appointed the Operations Director as their representative. They have been fully empowered to monitor the performance of, and initiate improvements to the QMS. This information is distributed among the management team via a regular report and management review meetings.

Continuous Improvement will be driven throughout the business by the management team based on key performance indicators and feedback to improve the capabilities of both of Aerospace and Controls Technology and its suppliers to form a valued supply chain for their customers.
